

A decorative graphic on the left side of the slide consists of a series of vertical and diagonal lines, some ending in small circles, resembling a circuit board or a stylized tree structure. The lines are white and the circles are light blue.

DIGITAL LITERACY

PROJECT REPORT

TITLE PAGE

- NAME: Manvendra Kumar
- REG NUMBER: 25BAI11479
- BRANCH: CSE AI/ML
- YEAR: 2025
- COURSE CODE: CSE0001
- DATE: 30 MARCH 2026

TASKS

1. CREATE A DIGITAL LITERACY AWARENESS INFOGRAPHIC
2. BUILD YOUR STUDENT DIGITAL PORTFOLIO
3. EXPLORE CODING & COLLABORATION PLATFORMS
- 4.DRAFT A PROFESSIONAL EMAIL & ETIQUETTE GUIDE
5. CYBERCRIME AWARENESS CASE STUDY & PREVENTION GUIDE

INTRODUCTION

This Digital Literacy project examines how students interact with digital technologies in their academic and everyday lives, with a focus on using them safely, responsibly, and effectively. It is built around practical scenarios such as attending online classes, communicating through professional emails, using coding platforms, and making digital payments. Through these activities, the project develops essential skills like identifying online threats, safeguarding personal information, and maintaining proper online etiquette.

The project includes creating infographs ,creating an awareness quiz, completing a beginner level coding challenge, drafting formal emails, and analysing cyber issues such as cyberbullying. It also highlights the importance of knowing official reporting channels like the National Cyber Crime Portal and helpline 1930. Overall, this project demonstrates that digital literacy is not just a technical skill, but a necessary life skill for academic growth and safe participation in today's digital world.

TASK 1 PROJECT REPORT

For this task, I used Canva to design an infographic on digital literacy. Canva was chosen because it is user-friendly and provides a variety of templates, icons, and design elements that make it easy to create visually appealing content. My infographic covers three main topics: what digital literacy is, useful digital tools for students, and safe internet practices. The design explains digital literacy as the ability to use digital technologies effectively and responsibly. It also highlights useful tools such as Google Docs, Zoom, and online coding platforms that help students in their academic work. In addition, it includes important safety tips like using strong passwords, avoiding suspicious links, and protecting personal information online. I used icons, short points, and a clean layout to make the information easy to understand at a glance. One interesting part of this task was learning how to present information in a visual format instead of plain text. However, choosing the right layout and balancing content with design was slightly challenging. Overall, this task helped improve both my creativity and understanding of digital literacy.

TASK 2 PROJECT REPORT

For this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. Each of these platforms serves a different purpose and is useful for my academic and professional growth. GitHub is mainly used for storing and managing code, and I created a profile README including my basic details and learning goals. LinkedIn is a professional networking platform where I added my education details to build an online presence. Stackoverflow is a platform for data science and machine learning, where users can practice problems and work on datasets. These platforms will be very helpful for me over the next four years. I plan to use GitHub to upload my projects and track my progress in coding. LinkedIn will help me connect with professionals, explore internship opportunities, and build a strong professional profile. Stackoverflow will be useful for improving my problem-solving skills and gaining practical experience in data-related fields. Overall, this task helped me understand the importance of maintaining a professional online presence from an early stage

TASK 3 PROJECT REPORT

For this task, I worked on both coding practice and Google Workspace collaboration. In Part A, I created an account on HackerRank and completed a beginner-level problem, which helped me understand basic programming logic and problem-solving techniques. It gave me practical exposure to writing and testing code in an online environment.

In Part B, I created a Google Form as a Digital Literacy Awareness Quiz for my classmates. The form included five questions with a mix of multiple-choice and short-answer types. I also viewed responses through the linked Google Sheet, which helped me understand how data can be collected and analyzed efficiently.

These tools will be very useful for my academic growth. HackerRank will help me improve my coding skills regularly and prepare for technical assessments. Google Forms and Sheets will help in conducting surveys, organizing data, and working on collaborative academic tasks. Overall, this task helped me develop both technical and practical digital skills that are important for my studies.

TASK 4 PROJECT REPORT

A common situation where poor digital communication can cause serious problems is when a student sends an unprofessional or unclear email to a professor. For example, if a student writes a message without a proper subject line, greeting, or clear explanation, the professor may ignore it or misunderstand the request. This can lead to missed deadlines or loss of marks.

In a hypothetical case, a student urgently needed an extension but sent a vague email saying “Please help” without any details. As a result, the professor did not respond in time, and the student faced penalties. This situation could have been avoided by writing a clear and polite email, including the reason for the request, proper structure, and a respectful tone. This shows that effective digital communication is very important, especially in academic and professional settings.

TASK 5 PROJECT REPORT

While researching cybercrime, what surprised me the most was how easily people can become victims, even with basic mistakes like clicking unknown links or sharing OTPs. I chose phishing as my case study, What surprised me most during this research was the sheer psychological sophistication of "social engineering." I used to think cybercrime was mostly about complex coding or "hacking" into servers, but I realized that most victims are compromised simply because a scammer exploited human emotions like fear or curiosity.

This task made me more aware of the importance of staying cautious online and understanding available reporting options like the National Cyber Crime Portal and helpline 1930. One habit I will personally change is being more careful about what I share online and how I interact with others on social media. I will also avoid engaging in harmful or negative online behavior and encourage others to follow safe digital practices.

CONCLUSION

This project helped me understand the real importance of digital literacy in both academic and everyday life. I learned how to use digital tools effectively, create professional emails, and build a strong online presence through platforms like GitHub and LinkedIn. It also increased my awareness of cyber safety, including identifying online threats and following secure practices, especially in digital payments. Activities like designing an infographic and creating a quiz improved my creativity and practical understanding. Overall, this project has made me more confident, responsible, and aware as a digital user, and better prepared for future academic and professional opportunities in a technology driven world.

REFERENCES

Tools and Platforms Used:

- 1) Canva (for creating infographic)
- 2) Google Forms and Google Sheets (for quiz and response analysis)
- 3) HackerRank (for coding practice)
- 4) GitHub (for profile and project repository)
- 5) LinkedIn (for professional profile)
